An Introduction to Support Vector Machines and other kernel-based learning methods

NELLO CRISTIANINI AND JOHN SHAWE-TAYLOR

Contents

	eface tation		ix xiii
1		Learning Methodology	1
	1.1 1.2	Supervised Learning.	
	1.2 1.3	Learning and Generalisation	
		Improving Generalisation	
	1.4 1.5	Attractions and Drawbacks of Learning	
	- 10	Support Vector Machines for Learning	
	1.6	Exercises.	
	1.7	Further Reading and Advanced Topics	8
2	Line	ar Learning Machines	9
	2.1	Linear Classification	. 9
		2.1.1 Rosenblatt's Perceptron	.11
		2.1.2 Other Linear Classifiers	.19
		2.1.3 Multi-class Discrimination	20
	2.2	Linear Regression	.20
		2.2.1 Least Squares	.21
		2.2.2 Ridge Regression	.22
	2.3	Dual Representation of Linear Machines	.24
	2.4	Exercises	.25
	2.5	Further Reading and Advanced Topics.	25
3	Kerr	nel-Induced Feature Spaces	26
	3.1	Learning in Feature Space.	.27
	3.2	The Implicit Mapping into Feature Space.	
	3.3	Making Kernels.	
		3.3.1 Characterisation of Kernels	
		3.3.2 Making Kernels from Kernels	
		3.3.3 Making Kernels from Features.	
	3.4	Working in Feature Space	

Contents

	3.5	Kernels and Gaussian Processes.	48
	3.6	Exercises	49
	3.7	Further Reading and Advanced Topics	.50
4		eralisation Theory	52
	4.1	Probably Approximately Correct Learning	
	4.2	Vapnik Chervonenkis (VC) Theory	
	4.3	Margin-Based Bounds on Generalisation	
		4.3.1 Maximal Margin Bounds	
		4.3.2 Margin Percentile Bounds	
		4.3.3 Soft Margin Bounds	
	4.4	Other Bounds on Generalisation and Luckiness	
	4.5	Generalisation for Regression	
	4.6	Bayesian Analysis of Learning	74
	4.7	Exercises.	
	4.8	Further Reading and Advanced Topics	
5	Opti	imisation Theory	79
	5.1	Problem Formulation.	
	5.2	Lagrangian Theory.	
	5.3	Duality	
	5.4	Exercises	89
	5.5	Further Reading and Advanced Topics.	90
6	Supp	port Vector Machines	93
6	Supj 6.1	Support Vector Classification	. 93
